

# Laboratory Testing Information

---

## Blood Tests

Blood tests are used to evaluate overall health, detect infections, monitor chronic conditions, and assess organ function. Some tests may require fasting for accurate results.

## Urine Analysis

Urinalysis helps identify urinary tract infections, kidney conditions, and metabolic disorders. Patients may receive instructions regarding sample collection procedures.

## COVID-19 and Respiratory Testing

Respiratory testing may involve nasal or throat swabs to identify viral or bacterial infections. Results turnaround times vary depending on the test type.

## Routine Screening Panels

Routine laboratory panels may include cholesterol, glucose, liver function, and thyroid testing. These screenings support preventive healthcare and early detection.

## Receiving Results

Laboratory results are typically available through the patient portal or by physician follow-up. Patients should discuss abnormal findings directly with their healthcare provider.
